

Automation · Service guide

n8n, Make & Zapier Automations

The busywork between your apps, done automatically.

We connect the tools you already use with n8n, Make or Zapier. Leads are routed, data stays in sync, invoices and reports go out on time, and AI steps handle the reading and writing. Every automation has error alerts and a plain-English guide.

Message only

How it works	Works in the background
Best for	Platforms & Integrations
You stay in control	Built in accounts you own, on n8n, Make or Zapier
First step	A short call with no obligation

How this helps

What it means for your business

Your team spends hours copying data between apps, and things fall through the cracks.

Repetitive reading, sorting and writing is prepared for you, so your team starts from a draft instead of a blank page. You check the work before it is used.

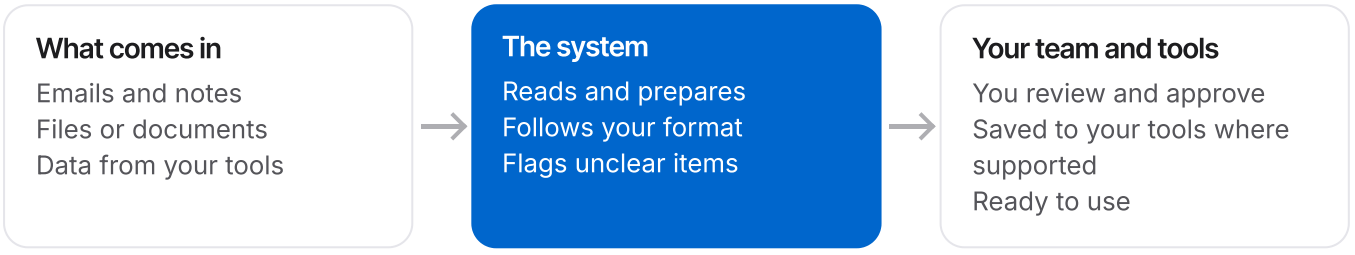

What you get

- Hours of copy-paste work gone every week
- Data that matches across all your tools
- Errors caught and reported, not silently missed
- Automations your team can understand and change

What changes day to day

	Common today	With this service
Starting point	A blank page	A prepared draft
Format	Varies by person	Follows the format you set
Unclear items	Easy to miss	Flagged for a person to check
Your time	Spent on repetitive work	Spent on review and decisions
Final say	Your team	Still your team

How it fits with your business

How it works

From start to finish

Step 1

We list the busywork

What your team copies, checks and sends by hand.

Step 2

We design each flow

Triggers, steps, rules and what happens when something fails.

Step 3

We build and test

On real examples, in a test copy first.

Step 4

We document and monitor

A plain-English guide, error alerts and monthly checks.

Example · Work scene

A new lead form, a CRM, a team chat and an inbox that do not talk to each other.

Works in the background

What happens next

Every lead is enriched, scored, routed and followed up automatically.

Automation run

Trigger	New form lead
Steps	Enrich, score, route, notify
Tools	Webflow, HubSpot, Slack, Gmail
Runs this week	412 with 0 failures
Alerts	Errors go to the owner

How easy it is

We do the heavy lifting

Most of the work happens on our side. You make the decisions, and we tell you exactly what we need.

What we handle

- Agree the format with you
- Connect your tools where supported
- Set the rules and the review step
- Test it on real examples
- Adjust the results after launch

What you do

- Share your rules and examples
- Approve the format
- Review the first results
- Tell us what to change

Service levels

Start simple, go further when you are ready

Level 1

Draft mode

We prepare the work and you approve it before it is used.

Level 2

Connected

Runs with your tools where supported, on the schedule you set.

Level 3

Advanced

More rules, several workflows working together, and reporting.

The right level is confirmed during discovery, based on your business and the tools you use.

What we need from you

- Examples of how the work is done today
- Access to the tools it needs to work with
- The format you want the result in
- Who on your team approves it

How we get started

1. A short call about your business
2. A clear plan and scope
3. Setup and testing with you
4. Go live with your approval

Why Calvyrn

Why businesses choose to work with us

Built for your business
Your rules, your wording and your tools. Not a one-size template.

You approve first
Nothing goes live until you have seen it and said yes.

Start small
Begin with one service or one first version, then add more if it helps.

One team
AI systems, automations, websites and web applications in one place.

Plain language
You always know what is being built, why, and what comes next.

Honest limits
We tell you what a system cannot do and where a person should stay involved.

You stay in control

- Built in accounts you own, on n8n, Make or Zapier
- Nothing is deleted or sent without the rules you approve
- Every failure sends you an alert with what happened

Questions you may have

Which tool should we use?
Zapier is quickest for simple flows, Make is flexible and good value, and n8n suits complex or private workflows and can run on your own server. We recommend one after seeing your needs.

What happens when an app changes or a step fails?
You get an alert with the details, and on a care plan we fix it, usually the same day.

Can you add AI steps?
Yes. Reading emails and documents, summarising, sorting and drafting replies, always with rules for what needs a person.

How long does it take to set up?
Most small automations are live within one to two weeks of receiving what we need from you.

Important notes

- Examples in this guide use fictional businesses, names and details.
- Results depend on your business, tools, customers and how the service is set up. We do not guarantee revenue, bookings or search rankings.
- AI can make mistakes. That is why approvals, clear limits and human hand-off are part of the setup.
- Features depend on your plan and on the tools you use. The final scope is confirmed during discovery and in your proposal.
- This guide is not legal, medical, tax or financial advice.
